As the aforementioned RFC does not include any reference of encoding spaces as +, I guess using %20 is the way to go today. For example, "%20" is the percent-encoding for ...

Set the JAVA_HOME Variable Windows 7 - Right click My Computer and select Properties > Advanced Windows 8 - Go to Control Panel > System > Advanced System Settings Windows ...

I am interested in knowing why "%20" is used as a space in URLs, particularly why %20 was used and why we even need it in the first place.

The output transformation you need (spaces to %20, forward slashes to %2F) is called URL encoding. It replaces (escapes) characters that have a special meaning when part of a URL ...
