What is solar wattage?

Wattage refers to the amount of electrical power a solar panel can produce under standard test conditions(STC),which simulate a bright sunny day with optimal solar irradiance (1,000 W/m²),a cell temperature of 25°C,and clean panels. In simpler terms,a panel's wattage rating tells you its maximum power output under ideal conditions.

How much wattage does a solar panel use?

However,wattage alone doesn't tell the full story--actual solar panel output depends on sun exposure,climate,and installation quality. Large rooftops and utility-scale projects use bigger,more powerful commercial solar panels ranging from 500 to 700 watts.

Can two solar panels produce the same wattage?

Even when two solar panels have the same wattage on the label,they may not produce exactly the same amount of power. That's because every panel includes a power tolerance,which tells you how much its actual output can vary from its rated wattage. A 400W panel with a ±5% tolerance may produce anywhere from 380W to 420W.
