---

CableFree 5G Small Cell Base Stations offer advanced features and "stand alone" capability for private 5G networks.

See the figure below for a snapshot of the output power, cell radius sizes and other features of different base station types, from small cells to macro cells.

We present a micro base station deployment strategy in 5G HetNets for obtaining high energy efficiency. It optimizes target values as are trade-offs at different user distribution ...

These "infill" small cells can be deployed on buildings and street lights and fixtures as well as on traditional cell towers. This smaller version gNode B allows for cost efficient deployment.

Learn how macrocells, small cells and femtocells differ in coverage, cost and performance -- and how each supports modern 5G networks.

The cellular micro base station market is set for rapid expansion, fueled by the global demand for enhanced coverage, high-capacity 5G networks, and smart city development.
