Why is solar thermal technology less developed in Argentina?

Solar thermal technology is even less developed, in part due to the low natural gas prices resulting from political strategies that aim to soften the impact of an unstable economy on family budgets. This review describes this gap by summarizing the current state of Argentine solar energy.

Does Argentina have a potential for solar energy utilization?

Conclusions Our work found a large gap between Argentina's potential for solar energy utilization and the current solar energy deployment, despite advantages such as a high solar and land resources.

When did solar thermal energy become a key energy source in Argentina?

Solar thermal energy in Argentina was already considered a potential key energy source in 1975, when a national R&D program for the development of solar energy and other renewables was launched, leading to numerous research programs (see next section) and the elaboration of norms and certification criteria for ST collectors .

How many solar panels will Argentina install in 2024?

Argentina installed 307 MW of solar in 2024, bringing its total PV capacity to 1.67 GW by year-end, according to energy market operator Cammesa. Verano Energy, a renewables developer headquartered in Chile, has started building a 200 MW solar project in western Argentina. The installation is due for completion and connection before the end of 2025.

Solar thermal technology is even less developed, in part due to the low natural gas prices resulting from political strategies that aim to ...

Located in an area with one of the highest solar radiations on the planet, the Cauchari solar plant will not only supply more than ...

Argentina's launching its first domestic solar panel factory, and this isn't just another industrial ribbon-cutting ceremony. This factory ...

Its latest report offers recommendations on how Argentina, Brazil, Colombia, Mexico and Peru can accelerate their solar growth trajectories and unlock investments.

It is generally acknowledged that Argentina has a solar resource that is highly suitable for the development of

both photovoltaic (PV) and solar thermal (ST) technologies.

Located in the sun-drenched San Juan Province, the new facility is expected to produce over 400,000 solar panels annually for both domestic and international markets. The ...
