This study develops a mathematical model and investigates an optimization approach for optimal sizing and deployment of solar photovoltaic (PV), battery bank storage ...

The work begins with outlining the main components and energy consumptions of 5G BSs, introducing the configuration and components of base station microgrids (BSMGs), ...

Proposing a priority-based energy management strategy that dynamically optimizes and coordinates the energy flow of base stations based on factors such as photovoltaic ...

This method excavates the peak shaving potential of 5G communication base stations based on the spatiotemporal characteristics of communication base stations.

In this paper, firstly, an energy consumption prediction model based on long and short-term memory neural network (LSTM) is ...

Case studies demonstrate that the proposed model effectively integrates the characteristics of electrical components and data flow, enhancing energy efficiency while ...
