Where is China's first large-scale lithium-sodium hybrid energy storage station located?

Baochi Energy Storage Station, China's first large-scale lithium-sodium hybrid energy storage station, starts operations in Southwest China's Yunnan Province on May 25, 2025. Photo: CCTV News China's first large-scale lithium-sodium hybrid energy storage station began operations on Sunday in Southwest China's Yunnan Province.

What is Baochi energy storage station?

Compared with current mainstream lithium-ion battery storage, the newly launched lithium-sodium hybrid energy storage station - Baochi Energy Storage Station - offers a longer cycle life and operation in a wide temperature range from -20 °C to 45 °C, according to Science and Technology Daily.

How does a hybrid energy storage system work?

It adjusts the frequency based on changes in the output active power, eliminating the need for mutual coordination among units, Tianyu Zhang et al. Simulation and application analysis of a hybrid energy storage station in a new power system 557 resulting in simple and reliable control with a fast response.

Can hybrid ESSs be used with energy storage converters?

Utilizing hybrid ESSs with the two types of energy storage converters can simultaneously harness the advantages of both systems, serve the needs of a large power grid, and may be used in future substation installations.

Combining high-performance sodium batteries with mature lithium technology enhances the station's energy regulation capacity, CCTV News reported.

On May 25, China's first large-scale lithium-sodium hybrid energy storage station -- the Baochi energy storage station developed by CSG -- was officially put into operation in Wenshan ...

Combining high-performance sodium batteries with mature lithium technology enhances the station's energy regulation capacity, ...

A simulation analysis was conducted to investigate their dynamic response characteristics. The advantages and disadvantages of two types of energy storage power ...
