What is a battery management system (BMS)?

Like lead-acid batteries, lithium batteries can be permanently damaged by overcharging, deep discharging, or extreme temperatures. That's where the Battery Management System (BMS) comes in. Often called the brain of the battery, the BMS ensures your batteries operate safely, efficiently, and for as long as possible. In this guide, we'll cover:

Why is battery management important in a camper van?

This is of course crucial for the lifespan of your camper van electrical system. A good battery management system is built to ensure safe operating conditions of your lithium batteries to prevent unsafe or stressed operating conditions that can damage individual cells. What does a BMS do?

Does a camper van need a BMS?

All of the above functions of BMS are crucial to your camper van electrical system health. However, the degree of BMS needed in a camper van depends on the size of your system and how you plan to use your system.

Which batteries have external BMS?

The industry leader for batteries with external BMS is Victron Energy. These batteries have truly amazing power densities, and if you're already using Victron charging components (MPPT, DC-DC, etc), using their batteries just makes sense. Victron external BMS does everything Battle Born's BMS does and then some:
