Does Denmark have a smart grid?

With these initiatives Denmark's smart grid sector expanded rapidly, particularly within the technology segment of the value chain. The country gained recognition as a leading hub for testing and demonstrating intelligent power solutions, with a notable share - 22% in 2011 - of all EU smart grid R&D projects taking place in Denmark.

Why is Denmark a leading hub for smart grid R&D?

The country gained recognition as a leading hub for testing and demonstrating intelligent power solutions, with a notable share - 22% in 2011 - of all EU smart grid R&D projects taking place in Denmark. This strong research and innovation environment solidified Denmark's role in shaping the future of intelligent electricity systems.

How can Denmark increase electricity consumption?

Major investments in the electricity grid have already been planned to support increasing electricity consumption. By 2030, Energinet, Denmark's transmission system operator (TSO), plans to build an extra 2,700 kilometers of power lines, with 3-4000 km planned by 2050.
