In our research, for the first time, we present a methodology to directly measure internal gas pressure during pre-instrumentation, cell operation and ageing via an embedded sensor ...

The influence of pyrolysis time and temperature on the electrolyte's gas production characteristics was analyzed using three evaluation indices: gas production, the "turning point" ...

The numerical and experimental analysis of three commercial lithium-ion batteries identified the strong nonlinear relationship between the gas production rate and core ...

Gas emissions from lithium-ion batteries (LIBs) have been analysed in a large number of experimental studies over the last decade, including investigations of their ...

This review proposes three key strategies to suppress gas generation: (1) oxygen lattice stabilization via dopant engineering, (2) solvent decomposition mitigation through ...

Here, we present a radically different methodology for operando analysis of gas evolution in lithium-ion batteries using optical fiber photothermal ...
