The proposed synergistic optimization strategy of the domain morphology regulation and the microstructure adjustment is valuable for further energy storage design, and ...

Here, we adopt the strategy of domain engineering to develop sodium bismuth titanate ($\text{Bi}_{0.5}\text{Na}_{0.5}\text{TiO}_3$)-based ceramics employed in the low-field situation.

Google has initiated a long-term collaboration with Energy Dome, a company developing an LDES solution known as the CO₂ Battery. This technology is designed to store ...

Here, the authors achieve high energy density and efficiency simultaneously in multilayer ceramic capacitors with a strain engineering strategy.

The New York State Energy Research and Development Authority (NYSERDA) today announced over \$5 million is now available to support innovative energy storage ...

Today, we're adding another technology to our portfolio: long duration energy storage (LDES). Through a new long-term partnership ...
