Who is delivering a battery energy storage system in France?

China's Envision Energy has been selected by Kallista Energy to deliver a 120 MW/240 MWh battery energy storage system (BESS) in Saleux, northern France. The project represents Envision's first independent storage contract in the French market and signals its continued European expansion.

Is France becoming a more attractive market for battery energy storage systems?

This report explores how France is becoming a more attractive market for battery energy storage systems (BESS). The French electricity system is dominated by nuclear and hydropower, which results in lower volatility - typically a driver of battery economics.

What is Envision Energy's first independent battery energy storage contract in France?

After previous triumphs in Europe, this project represents Envision Energy's first independent battery energy storage contract in France. Envision Energy will provide a minimum of a 14-year long-term maintenance (LTSA) agreement, starting construction in June 2025, ensuring ongoing presence in the area once the construction phase is complete.

How much energy does France have?

According to the European Commission, France currently has 400 megawatt (MW) of grid-scale BESS capacity installed, with another 760 MW in the pipeline - 360 MW of which is under construction. Interestingly, around 600 MW of distributed energy storage, installed at electric vehicle charging stations, is also connected to the French grid.

Is storage the missing piece in France's power system? France's electricity system is at a turning point. Long anchored by nuclear and hydro, it now faces ageing assets and ...
