---

Solar, wind, and other renewables are critical parts of the solution, but they are intermittent and dependent on storage technologies that are still maturing. Fusion promises ...

The new vision will focus on aggressively closing the S& T gaps needed to realize commercial fusion energy in the three key S& T areas identified and described further in the FESAC LRP: ...

One U.K. energy company is making big moves in nuclear fusion technology, potentially paving the way for cleaner energy.

While variable renewable energy sources such as wind and solar can deliver low-carbon power at scale, they require large-scale energy storage to balance supply and ...

In a potential new milestone for fusion energy research, researchers in China report achieving a state once only theorized for fusion plasmas, enabling stable operation under ...

Fusion could change the calculus for both nations and the globe. Whoever conquers it could build plants around the world and forge new alliances with energy-hungry ...
