What is a Hot Knife Separation Method? A knife heated to 300? melts EVA layer to separate glass from cell/EVA sheet (includes metal) without breaking glass.

With this in mind, this study introduces a novel hot knife method to efficiently separate and recover the back sheet layer from c-Si PV modules, a primary source of toxic ...

As proven by the Task 12 report, the Hot Knife method represents an innovative approach to address the challenges of PV module recycling in an environmentally efficient way.

This study provides a comprehensive analysis of various mechanical recycling methods for end-of-life solar photovoltaic (PV) panels, including Crushing, High Voltage Pulse ...

What is a Hot Knife Separation Method? A knife heated to 300? melts EVA layer to separate glass from cell/EVA sheet (includes metal) without ...

Wahman et al. (2023, 2024) proposed two methods to separate the backsheet of waste photovoltaic (PV) panels: a selective mechanical peeling process and a hot knife technique.
