What is a battery capacity calculator?

Our super-easy battery capacity calculator takes the guesswork out of sizing your battery. In simple mode, just input these essentials: Load Power (W): Your device's wattage. Runtime (hours): How long you want it to run. Battery Voltage (V): The battery's nominal Voltage.

What is the capacity of a battery or accumulator?

The capacity of a battery or accumulator is the amount of energy stored according to specific temperature, charge and discharge current value and time of charge or discharge.

How much battery capacity do I Need?

This means you need a battery (or battery bank) of at least 83.3Ah capacity to meet that 1 kWh demand. However, you usually don't want to fully discharge the battery to avoid damaging it. For most deep-cycle batteries, staying at around 50% discharge is safer. Doubling 83.3Ah gives about 166.7Ah capacity to account for that 50% cushion.

How many amps can a 20 Ah battery power?

Picture this: a battery rated at 20 Ah can power a device drawing 20 amps for one hour or 1 amp for 20 hours. This simple metric forms the heart of your battery capacity and helps you decide if you've got the power you need for your applications.

Learn how to estimate battery capacity using amp hours to match your home appliances. Enjoy reliable off-grid power with ease.
