How much does solar cost in Ontario?

In Ontario, the cost of solar for every watt installed is about \$2.7-3.4 for residential customers but can be as low as \$1.6/W for large-sized solar power systems installed on commercial facilities. As for the total cost, it depends on your energy consumption and a few other factors. Let us take a look at all these factors.

How much does a 1 MW solar system cost?

For someone who needs a 1 MW system, the price per watt might drop a little. Suppose it drops to \$1.5/W, the total system cost would then be  $1,000,000 \text{ W} \times \$1.5 = \$1.5 \text{ million}$ . Households, on the other hand, consume an average of 9000 kWh annually, according to the Ontario Energy Board.

How much solar can a 20 foot container hold?

20 foot containers can expand from 3,000W of solar up to 6,000W. 40 foot containers can expand from 3,000W up to 12,000W of solar in the future. We love the strategically placed solar panels on top of the container roof - we've accomplished this secure mounting with our field tested RPS Scalable Ground Mount.

Does the solar supermarket have products in the cart?

No products in the cart. Privacy Policy Built with WooCommerce. The Solar Supermarket provides the largest selection of solar panels, inverters, batteries, charge controllers and balance of system components to Canadians at the lowest possible prices. Our primary markets include residential grid tie and off-grid cottages.
