In this article, we describe and analyze the main proposals discussed in the IEEE 802.11bn Task Group (TGbn), such as scheduled power save, (semi-)dynamic power save, ...

The power Save feature helps APs enter a power-save mode or low-power mode by associating a calendar with the corresponding power profile. This feature is aimed at conserving energy ...

Such a mechanism, called Dynamic Power Save (DPS), is introduced by TGbn [9]. DPS generally keeps the AP in Low Capability Mode (LCM), a power-saving mod that restricts the AP to a ...

Outdoor APs are indispensable for extending high-quality, secure wireless connectivity to exterior environments subject to harsh conditions. Their rugged design, cutting ...

With the standard IEEE 802.3at Power over Ethernet (PoE), the WBS-900AC CPE can be easily installed in areas where power outlets are not available, further enhancing its versatility and ...

Outdoor access points are a great way to extend your wireless network to a farther distance. You can save a lot on installing new infrastructures and running new cables. For ...
