With a maximum storage capacity per ESS of 96,8 kWh it supports business needs such as self-consumption maximization, grid support, ancillary services, demand management, and peak ...

This groundbreaking test, conducted under real-world scenarios and innovative methodologies, validates the ESS's capabilities ...

Low power supply costs. Energy storage can be directly absorbed from PV or wind systems, reducing power transmission and distribution costs. Storage and PV/wind share the step-up ...

Conducted under the scrutiny of TÜV Rheinland at a national key fire safety laboratory, this test sets a new benchmark for safety standards in energy storage systems (ESS).

This groundbreaking test, conducted under real-world scenarios and innovative methodologies, validates the ESS's capabilities in extreme conditions, marking a significant ...

With a maximum storage capacity per ESS of 96,8 kWh it supports business needs such as self-consumption maximization, grid support, ancillary ...
