Do solar panels produce more electricity than you need?

Sometimes your solar panels produce more electricity than your home needs, especially during peak sunlight hours. That extra energy doesn't go to waste. If your system includes a battery, it stores the excess electricity for later use, such as at night or during a power outage.

Why are solar panels important?

Solar panels are the most important part of a solar power system since they produce the electricity that eventually finds its way to your laptop, lights and television. In this basic introduction, we look at how this happens. How do solar panels work? Solar panels convert sunlight into electricity through a process called the photovoltaic effect.

Do solar panels generate electricity?

The more panels you install, the more electricity your system can generate. Even with solar panels on your roof, most homes remain connected to the electric grid. The grid is the system of power plants, substations, and power lines that deliver electricity to homes and businesses.

How efficient are solar panels?

Efficiency is a measure of how much of the sun's potential energy a panel will convert into solar power. Most panels have an efficiency rating of between 15-23%. You shouldn't worry too much about panel efficiency. High-efficiency panels only matter where you have a small space to work with. They do however cost more.

See our step-by-step guide to solar panels and how they work for residential homes. Let us help you find a solar panel installer.

From the fundamental components of a solar power system, including the heart of the operation - solar panels, to the critical roles of ...

Solar energy has become one of the most popular ways for homeowners to save on electricity bills while reducing their carbon footprint. But understanding how solar panels work, ...

Solar energy has become one of the most popular ways for homeowners to save on electricity bills while reducing their carbon ...

There are two primary ways to harness solar energy: photovoltaic (PV) systems that convert sunlight directly
