Picture this: You're sipping coffee in your sun-drenched sunroom while the glass walls literally pay your electricity bill. That's the promise of integrating photovoltaic (PV) panels into sunrooms - ...

Installing insulated panels or double-glazing on glass walls and roofs can dramatically reduce the amount of heat that enters or leaves your room. This upgrade not only ...

SHGC measures how much solar heat the glass allows in; lower values are better in hot climates to reduce cooling costs. To further improve energy efficiency, ensure your ...

When you add a sunroom like this (a solarium or conservatory), it's a glassed-in living space typically attached to the house and accessible from indoors. It's designed to ...

Glass with a high SHGC value allows a greater percentage of solar heat into the interior. That means, depending on your climate, you can select the amount of heat your room absorbs from ...

The sunlight entering east-facing glazing occurs early in the day and is less likely to cause unwanted solar gain in the summer than afternoon ...
