In terms of solar photovoltaic generation by autonomous communities, Extremadura was the community that produced the most electricity in 2023, with 9,168 GWh, which represents 24.6 ...

With the goal of reaching climate neutrality by 2050, the country is implementing measures to achieve a 100 percent renewable electricity mix by that year. Although wind is ...

Learn how PV continues to drive Spain's energy transition under ambitious goals for 2025 and 2050. Download the full report here to explore Spain's evolving PV landscape.

Spain's solar PV capacity reached 6 GW in 2024, making it the country's top power source with a 25.1% share, surpassing wind at ...

But the sunlit uplands of solar have begun to overheat. Spain has built so much solar capacity that at certain times of day it produces far more electricity than it needs. Prices ...

In Spain, the progress has been even more dramatic. Photovoltaics reached an all-time high, accounting for 21% of electricity ...
