Why is the US investing in Greece's LNG project?

The US is highly invested in this project since Greece's gas network is the main gateway for American LNG into the Balkans and Eastern Europe. Currently, Greece's national LNG capacity exceeds 10 billion cubic meters annually through the Revithoussa terminal and the Alexandroupoli Floating Storage and Regasification Unit (FSRU).

How many BCM of LNG can Greece regasify a year?

The facility, with a capacity to regasify a maximum of 5.5 billion cubic metres (bcm) of LNG annually, complements a joint initiative by Greece and those countries to facilitate gas flows.

How has Greece increased its LNG import capacity?

Greece, which typically consumes about 6-7 billion cubic meters of gas a year, has increased capacity for LNG imports through the upgrade of its Revithoussa LNG terminal and the recently completed Alexandroupoli floating storage regasification unit (FSRU).

How much natural gas will Greece transport a year?

Upon its completion, this ambitious project is projected to transport an estimated 20-25 billion cubic meters of natural gas annually from south to north, positioning Greece as a leading player in securing Europe's energy independence from Russian supplies and significantly enhancing its geopolitical standing.

Operated by the Gastrade consortium, the DNV-classed terminal off Greece will curb the region's dependence on natural gas delivered through a single, land-based pipeline.

Greece will be key in creating a more interconnected and resilient natural gas market in Southeast Europe. The floating storage and regasification unit (FSRU), known as ...

The project is expected to increase gas transmission capacity from Greece to Bulgaria by 50 percent (from 2.3 billion to 3.6 billion cubic ...

The Greece-North Macedonia Interconnector is expected to start construction in 2025 and will facilitate the transportation of natural gas between Greece and North ...
