---

January 2025: NSG Group has commenced operations of a new solar glass production line in the United States, strengthening its position in the solar photovoltaic glass ...

With PV module capacity ramping up, glass suppliers have been investing in new solar glass production capacity. As in India and China, new facilities are popping up in North ...

Today's conventional crystalline PV module manufacturing process involves three major "energy spending materials" - silicon as cell material (mono - as well as poly crystalline), glass and ...

Technological advancements in glass manufacturing, resulting in thinner, more efficient, and durable glass modules (such as 3.2mm, 2.5mm, and 2.0mm variations), are ...

Current solar photovoltaic (PV) installation rates are inadequate to combat global warming, necessitating approximately 3.4 TW of PV installations annually. This would require ...

The manufacturing process for solar glass involves several precision-driven steps to ensure the production of high-quality, high-transmittance glass suitable for solar applications:
