Solar energy utilization in the aviation industry has a rich history dating back several decades. The first significant milestone in ...

Solar-powered aircraft are electric aircraft that can be an airplane, blimp, or airship and use either a battery or hydrogen to store the energy produced by the solar cells and use that energy at ...

Explore how solar energy cuts emissions, extends flight times, and reduces costs while overcoming challenges like battery limits and weather ...

A Swiss pilot just set a record for the highest solar-powered flight, showing a clean-energy possibility for aviation.

At Airbus, we are working to use this alternative renewable energy source to power high-endurance stratospheric flight. Our advances in solar cell technology enable unmanned aerial ...

This section unveils the essentials of using solar energy to power aircraft, showcasing the potential it holds for shaping an eco-friendly future of air travel.
