It's not the actual battery voltage, but it's what the BMS reports. If a small load or charge restores the actual voltage, it's just a characteristic of that BMS and not a concern.

Here's a Quick Answer you can use for a Google Featured Snippet: Quick Answer: A solar battery may lose power due to age and wear, improper charging, temperature ...

You rely on your Lithium battery for your solar setup, caravan, or off-grid system but what happens when it won't charge, drops power unexpectedly, or just refuses to wake up?

It seems to be not very charged at all and simply is running down to zero state of charge and you see the weakest cell drops in voltage first. The battery is either out of balance, ...

You rely on your Lithium battery for your solar setup, caravan, or off-grid system but what happens when it won't charge, drops power ...

Regularly inspect lithium battery packs for signs like swelling, low voltage, or overheating to catch problems early and keep them safe. Use simple tests such as visual ...
