Maximize your recycling rate with Sesotec: Innovative sorting systems for color-pure, contaminant-free glass - precise, space-saving, and economical.

Eliminate a sorting step - the MSort AW is the ideal choice for efficiently colour sorting dry hollow or flat glass. It enables three separate materials to be sorted out at the same time instead of ...

The MIA Multi Function Glass Color Sorter is an advanced technology that utilizes sophisticated sensors and algorithms to precisely sort waste glass by color, size, and quality parameters.

Uses sensors to measure the color of the glass based on the CIE color space (a standardized way of representing colors). Provides precise color data for accurate sorting.

Optical glass sorting machines are automated systems designed to identify and separate different types of glass based on visual properties like color, transparency, and ...

Several techniques are employed for glass color sorting, each with its pros and cons. In this section, we explore the common methods used in the industry and their effectiveness.
