as of a couple of days ago, I started having this issue. The black is going from printing nicely to approx 50% injection after about 20" of printing. Powerful cleaning get the ...

A powerful clean will often draw enough ink into the hose to print for a while as it uses a lot more suction than printing does. Also when you replaced the damper, did you fit a ...

We have a 4 x 8 table flatbed printer and I was wondering if any of you have every increased your suction with a larger vacuum pump on your flatbed printer?

Just found this page the other day and was hoping for some help. Been using a epon s60600 for the last few years at my local sign shop. Recently we've been getting ...

I have seen some units using a double spoil board where the bottom section of MDF has a X pattern to distribute the suction evenly and a second MDF sheet it laid on top of that ...

I want to thank all the members that have upgraded your accounts. I truly appreciate your support of the site monetarily. Supporting the site keeps this site up and ...
