How is the Swazi government advancing its energy infrastructure?

In collaboration with private entities and foreign aid programs, the Swazi government is taking crucial and necessary steps to advance its energy infrastructure and deliver power to the 17% of the population (more than 200,000 people) living without it.

Are solar panels a viable source of electricity in Eswatini?

Photovoltaic (PV) solar cells are increasingly prominent sources of small-scale electricity production in Eswatini. The government actively encourages the adoption of solar panels in residential and commercial buildings to provide both electricity and water heating.

Should we be concerned about waste from solar or wind?

A kilogram of arsenic or mercury is not the same as a kilogram of cotton in municipal waste. So, how concerned should we be about the toxicity of waste from solar or wind? Let's start with wind. 80% to 85% of wind turbine components can be recycled; it's the blades that can't be (at least not easily).

What does the Swazi energy pledge mean?

This pledge signifies a crucial step toward Swazi energy independence, bridging the stark urban-rural economic divide and promising new employment and educational opportunities. The commitment is more than a superficial gesture.

While wind energy production in Eswatini is negligible, the ...

The objective of this research is to assess the viability of integrating energy storage systems with wind and photovoltaic (PV) energy sources in order to provide telecommunication networks ...

The overall message is similar: less waste is produced from solar, wind, and nuclear than coal. And they are very small compared to other waste streams such as plastics ...

The high cost of waste disposal and the potential health impacts on tourism have affected businesses and the overall economy. ...

Solar and wind waste is piling up with no clear plan for disposal, raising new questions about the cost of going
