Our operations Drax owns and operates a portfolio of flexible, low-carbon and renewable UK power assets - biomass, hydro, and ...

In this study, generic dynamic models are developed for VSWGs, PVs and battery energy storages systems (BESSs) which include inertia emulator and droop-based frequency ...

Our operations Drax owns and operates a portfolio of flexible, low-carbon and renewable UK power assets - biomass, hydro, and pumped storage generation - which ...

Combining onshore wind, solar PV and battery energy storage assets at a single location can create value-added systems compared to standalone applications with asset characteristics ...

A new Oxford Smith School working paper¹ finds Great Britain's (GB) wind and solar resources are more than sufficient to meet all its energy needs, both practically and economically.

Microgrids powered by solar, wind, and battery storage are being deployed to enhance energy access and reduce reliance on fossil fuels. The Orkney Islands' Smart Energy Islands Project ...
