---

Europe's reliance on vanadium imports, primarily from China and Russia, makes the supply chain vulnerable to geopolitical tensions ...

As battery deployment accelerates to meet global decarbonisation goals, vanadium demand is set to grow, driven by its role in long-duration energy storage, particularly in ...

A new vanadium redox flow battery lease model will cut the cost of long duration, utility-scale wind and solar energy storage.

The global energy transition is under threat unless more attention is paid to long-duration energy storage, Australian Vanadium ...

China's vanadium supply is expected to fall in 2025, given expected suspensions or output cuts and rising demand from the steel and vanadium redox flow battery (VRFBs) ...

However, with a weak construction market and fragile economy in China, this may only offset industry wide falls. Instead, it is new demand from the vanadium flow battery market ...
