Optimize your 3-phase power factor correction (PFC) systems with our advanced Vienna PFC reference design, ideal for Hybrid Electric Vehicle (HEV) and Electric Vehicle (EV) chargers, ...

Explore the closed-loop control of a Vienna rectifier simulation, optimizing power factor correction, harmonic reduction, and voltage regulation for high-power applications.

This paper benchmarks three topologies--the Vienna rectifier, the symmetrical boost PFC and the neutral boost PFC--for the purpose of comparison. To this end, it factors two of the industry's ...

A closed-loop auto-tuner proportional integral derivative (PID) controller for tuning the DC-link voltage, voltage neutral controllers, and DQ axis current for a power factor corrector with ...

This reference design, which highlights Silicon Carbide (SiC) technology, uses Microchip's mSiC(TM) MOSFETs and Schottky Barrier Diodes (SBDs) to achieve 98.6% ...

This design guide illustrates a method to control the power stage using the C2000(TM) microcontroller (MCU). The design also enables monitoring and control of a Vienna rectifier ...
