Some circuits need a negative voltage, so the positive side of a battery would be &quot;ground&quot;. Some circuits need positive and negative voltages, in which case there could be two batteries, one ...

Voltage has exactly the same problem: one terminal can only &quot;have a voltage&quot; when compared to another terminal. Voltage acts like distance: voltage and distance are double ...

Yes, because  $I$  is a function of  $V$ , as long as we're talking about resistors. Power is linearly proportional to voltage, though, if you're talking about a constant current device.

6 It's not the voltage but the current that kills, is a popular yet still incorrect incomplete answer. It is the ENERGY that kills. With static electricity you will be exposed to voltages much, ...

2 Line to line voltage for a 3phase network (120deg separation) is  $\sqrt{3}$ \*phase voltage. So for a 230V 3ph network the line-line is 400V

A current source can certainly have a voltage across it. If the voltage across a current source is zero, then it is not delivering or absorbing any power. However, if the voltage ...
