When the sun doesn't shine and the wind doesn't blow, humanity still needs power. Researchers are designing new technologies, from reinvented batteries to compressed air and ...

The energy capacity of new battery, wind, and solar projects that received approval climbed to 45GW this year, 96% higher than in 2024, according to data from Cornwall Insight.

Global renewable capacity is set to continue with robust growth in 2025, with forecasts pointing to more than 500 GW of new solar installations, 130 GW of new wind ...

All net new generating capacity in 2026 is forecast to be provided by renewables and batteries, according to new EIA data.

Driven by compelling economics and intensifying decarbonization commitments, these renewables have transformed from supplemental sources into the backbone of new ...

This growth highlights the importance of battery storage when used with renewable energy, helping to balance supply and demand and improve grid stability. Energy ...
